Project Name	Customer Care Registry

FLASK APPLICATION:

The screenshot displays the Visual Studio Code interface with a Flask application named 'app.py' open. The Explorer sidebar on the left shows the project structure with 'Get Started' and 'app.py' files. The main editor window shows the code for 'app.py', which imports Flask, creates an app instance, and defines a route for the root path. The terminal at the bottom shows the command 'flask run' being executed, resulting in the application running on http://127.0.0.1:5000. A warning message is displayed in the terminal, advising not to use the development server for production deployment.

```
1 from flask import Flask
2
3 app = Flask(__name__)
4
5 @app.route("/")
6 def hello_world():
7     return "<p>Welcome to Flask Application !!</p>"
8
9 if __name__ == "__main__":
10     app.run(debug=True)
```

Running on http://127.0.0.1:5000
Press CTRL+C to quit
PS C:\Users\ANU\OneDrive\Desktop\flask new> flask run
* Debug mode: off
WARNING: This is a development server. Do not use it in a production deployment. Use a production WSGI server instead.
* Running on http://127.0.0.1:5000
Press CTRL+C to quit

Welcome to Flask Application !!
